## *Would You Wonder*

Where does business come from?

In looking around to other businesses, and comparing them with the Florist trade, you will notice that we are almost by ourselves in the smug judgment that there is only so much business to be had.

Where this idea started, we certainly do not know, as flowers are universally liked and in any analysis, the surface of the demand has not been scratched.

Every day in our business, shops and greenhouses are set up, an ad is placed in the phone directory, and the proprietor sits back to wait for orders. In the unusual cases where the proprietor is aggressive, we see him working hard to take as much business as he can from a competitor in the belief that there are only so many flowers sold.

Would it not be much healthier for each of us and the industry as a whole to concentrate on creating new customers and stirring up new demands for flowers? It must be realized that the only worthwhile business is one which you yourself have created.

We say, therefore, that all of us should be mindful of the fact that production of flowers is increasing and quality is improving. We must go ahead. The only proper way to move forward is to make more people flower-conscious and urge the greater use of flowers for every purpose.

## COVER MAN 1952

Mr. Maurice Joyce, born in Pottsville, Penna., August 30, 1872. The business so capably operated by Mr. Joyce was founded by his father John D. Joyce in 1860 and has been operated by the same family through the years. Although in advanced years, Mr. Joyce does a fine job of growing while the retail establishment is ably conducted by his young understudy Richard A. Pugh. The store connected with the greenhouses establishment is most artistically arranged and is paneled in pecky cypress, it has an atmosphere of welcome and one more than senses this when you meet this fine old timer or his able understudy, Mr. Pugh. We salute Mr. Maurice Joyce of Pottsville, Penna.

## New and Recent Flower Seed Introductions that Deserve Special Consideration

The festival colors of Old Mexico, combined in one flower by the plant breeder's magic, bring this sparkling newcomer All America's TOP AWARD for 1952. For the first time — anywhere — there is true scarlet in Cosmos; a new color for the garden landscape. Early, heat-loving, easy to grow, Fiesta makes a compact 2½' plant with a riot of bloom all summer long. Flowers are semi-double, ruffled, borne like tropical birds amidst lacy foliage. It's a cutflower for the house, a handsome border subject for the garden — neat, trouble-free. Fiesta will be the most important, most publicized flower seed novelty of the year — be sure you have it!

Tr. Pkt. \$ .75      ¼ oz. \$1.25      Oz. \$4.00

Like tiny dahlias, each with its pointed petals tipped with contrast, these perfect miniature Zinnias make the ideal garden edging subject. Dwarf plants begin blooming early; grow into tidy, well-behaved 12" mounds of brilliant color, each plant different. Pick dozens of flowers, no two alike (yes, they do have cutting stems, and dainty foliage quite unlike most Zinnias). The variegated flowers, each the size of a silver dollar, fit uniquely in the Modern house, yet look perfectly at home in an old-fashioned bouquet. The perfect size for window boxes; apartment gardens, Persian Carpet is still a real Zinnia — easy to grow, thriving on heat, it produces a wealth of bloom with miniature care.

### CINERARIA

#### Siter's Hybrids

This is an early new group of Cineraria hybrids, blending for a perfect color combination from the bright eye types through the finer pastel shades. These new types carry large flower heads with medium, large individual flowers. They are a distinct improvement over the original Siter's Strain; and because they are hybrids, cannot be offered by anyone but the originator.

## *Greenhouse Hybrid Snapdragons*

Another *Gloeckner* Introduction

### NEW YODER BROS. HYBRIDS

These important new imported hybrid snapdragons are the result of 12 years of intensive hybridization by Yoder Bros., Barberton, Ohio. For December and January flowering they are stiff stemmed and produce long tapering flower spikes. These hybrids also are very valuable for the spring crop. There is a minimum amount of side shoots which makes them well adapted to single-stem culture as well as for a pinched crop. We are fortunate to introduce to you these new improved Yoder hybrids. All are worthwhile introductions and deserving of a trial.

#### IVORY

**Twenty Grand**—A medium early winter flowering variety; fine keeper.

**Apollo**—Larger flowered and more vigorous than Margaret, otherwise very similar to that variety.

#### WHITE

**Jet Pilot**—A medium early paper white, long spikes; similar to White Wonder in form; much greater vigor.

#### LIGHT PINK

**Whirlaway**—Medium early; large floret; close spacing; long spike; a little deeper color than Mary Ellen.

#### ROSE PINK

**Star Charter**—A wide floret similar to that of Christina; vigorous uniform growth; close spacing of florets. A beautiful flower and an excellent keeper.

**Crusader**—Color and season that of Dorcas Jane.

#### DARK PINK

**Pensive** — A little later than Christmas Cheer but stronger. Cleaner growth, large floret.

#### BRONZE

**Cavalcade**—A lively golden bronze; extremely vigorous; long spikes; outstanding keeper.

**Gallant Fox**—Deep orange bronze, similar in color to Lady Dorothy; much stronger and more vigorous; compact floret placement; a little earlier than Barbara.

#### YELLOW

**Day Star**—Very early; good uniformity; long spike; flower a little small.

**War Admiral**—Just follows Day Star. Closer spacing and somewhat larger florets.

#### HYBRIDS

Seeds is sown July 5 to 15 for pinched crop for early winter flowering. Single-stem crop for early winter, sow August 5 to 15. High temperature inhibits germination of the seed, and one must, therefore, select a cool location for the flats in summer. However, for fall and winter sowing, germinate in 60 to 65 degree temperature.

Damping off is a serious problem and all precautions should be taken to avoid it. The soil should be sterilized with steam or other efficient measures and after the seed germinates good circulation of air and very little watering will help to prevent this trouble.

Soil to be used for seed flats should have two parts leaf mold, two parts well rotted manure, two parts soil and one part sand. Steam sterilize the flats and soil about one week before sowing, also water the soil well before sowing. For four inch plants for Spring sale sow seed in August. If 2¼ inch plants are wanted for Memorial Day, sow seeds in December. Many growers make monthly sowings from August to March.

For potting soil use the same mixture as above but add more soil and a three inch pot of Electra or complete fertilizer, to 2½ bushels of soil.

Begonia seed will germinate better in a temperature of 60-70° F. Grow Begonias in 55° temperature.

Mite, Nematode and Aphis are sometimes troublesome.

## Calceolaria

The soil used in germinating the seeds should be made up of two parts leaf mold, two parts well rotted manure, two parts soil, and one part sand. Sterilize the soil and flat with steam to eradicate all disease.

Sow the seeds lightly over the surface and cover the flat with a suitable covering. Calceolaria will germinate better when the temperature is cool, therefore, well shaded locations are better. August sowing will make large plants for May while November sowing will make good four inch plants. Some growers have used the wick irrigation method to germinate the seed with very good results.

## Cineraria

Positively do not use soil that was previously used for Mums and especially so if your Mums were affected with Verticillium wilt or Seidewitz disease. CINERARIAS are attacked by this wilt which is a soil borne fungus. It will cause the lower leaves to wilt and die and then gradually kill the entire plant. The only prevention for this trouble is to use new field soil from seed flats to finished pot. If you do use old chrysanthemum soil be sure to sterilize it. To be on the safe side it is recommended to steam sterilize soil before using.

### Siter's Hybrids

Trade Mark

They are a distinct improvement over the original Siter's Strain, and because they are Hybrids from original crosses, cannot be offered by anyone but the originator.

This is an entirely new group of Cineraria Hybrids, blended for a perfect combination of colors, ranging from bright-eyed types through the finer pastel shades.

These new types carry large flower heads with medium, large individual flowers.

# Delphinium PACIFIC STRAIN VETTERLE & REINLT

This is the finest strain of Delphinium yet introduced. From our personal observations in the field, we find this has unquestionably proven to be the leader in Delphiniums of the better type. The flowers are immense in size, well set on strong, straight stems, do not shatter, and are 40 to 90% mildew resistant. July or August sowing and transplanting into the field during the fall will produce an early crop with large spikes. Delphiniums require a well drained soil, neutral in reaction. January sowing will produce flowers during the summer.

## Astolat Series (NOVELTY)

This series of entirely novel shades in Delphinium has been worked on for quite a number of years. The color variations extend from **Pale Blush through all shades of Lilac Pink to Deep Raspberry Rose** with large brown, fawn and black bees for contrast.

## BLACK KNIGHT

The individual florets, 2 to 3" in diameter, are **Dark Purple**, beautifully rounded form with heavy velvety texture. Very large well formed spikes.

## BLUE BIRD SERIES

This series can be recommended as being the **clearest medium blues with white bees**. They carry well formed round flowers 2 1/4 inches in diameter on very long, graceful spikes.

## BLUEJAY SERIES

Color striking. **Clear medium to dark blue**. Very intense and alive with contrasting bee.

## CAMELIARD SERIES

A **pure lavender self**, with **white bee**, individual flowers, are very round and flat. Excellent growing habits.

## GALAHAD SERIES

Flowers **Clear White**, averaging three inches in diameter, pyramidal spikes, good branching habit, strong whippy stems with a high percentage of mildew resistance.

## GUINEVERE SERIES

**Light Pink Lavender self** with **white bee**. Individual florets 2 1/2 to 3 inches in diameter. For cut flowers and show purposes. Mildew resistance—50 to 70%.

## KING ARTHUR

**Brilliant Royal Violet** with large **white bee**. Individual florets 2 1/2 inches in diameter. Excellent for cut flowers. Mildew resistance from 80 to 90%.

## LANCELOT SERIES

**Clear Lilac self** with **white bee**.

## PERCIVAL SERIES

A companion to the Galahad Series. Large **glistening white flowers** with strongly contrasting **black bee**.

## ROUND TABLE SERIES

This represents **all the color combinations of the Knights and their Ladies** which will eventually be introduced. Some three hundred different crosses were used to make up this group.

## SUMMER SKIES SERIES

**Clearest Light Blue** with **white bee**. Individual florets 2 to 2 1/2 inches in diameter. Ideal for cut flower purposes. Mildew resistance—40 to 60%.

### DAUERNHEIM STRAIN

This strain is compact, free flowering and matures early. Tests have shown that it is more disease resistant and will do very well under conditions here in the States. The foliage is of medium size, the blooms well proportioned are particularly large, the white and white with eye often measuring six inches across.

Dauerheim's have selected and improved this strain for a number of years and in their trials have found this strain to be superior.

These are easy to raise from seed and are overlooked by many florists. Vast improvements have been made in these strains which come remarkably true to type and height. They are early flowering, blooming profusely the same year they are sown.

For small pot plant sales in the spring the seed should be started during January or February. To produce four inch pot plants for Mother's Day sow the seed in November.

## Larkspur

Larkspur seed may be sown directly in the open in the fall and with flower the following spring. There are two distinctly different methods used and each have a number of successful supporters. The first method is to sow the seed fairly early in the season about August 15th to September 15th. The small Larkspur seedlings will be sufficiently large enough when cold weather sets in to winter over when given a light mulch. The other method employed is to sow the seed in rows in late October or early November so that it will not germinate until early next spring. This crop of Larkspur will generally come in shortly after Delphinium Belladonna.

## Primula

### PRIMULA (Malacoides "Springtime")

SPRINGTIME is one of the finest Malacoides ever offered. This color is an attractive SALMON pink which does not fade with age. The flower stems are strong and support a profusion of good sized blooms; and unlike many other varieties of Malacoides, the foliage has good texture and is fairly resistant to rot. Thus the outstanding features of this variety are its pleasing salmon pink color, compact habit of growth and excellent keeping quality.

Seed sown in June will make good flowering plants for January. September sown seed will produce good plants for early Spring; while later sowing can be sown into small plants usable in combinations.

## Stocks

Stocks are very satisfactory for Winter and Spring flowering. Sowing the seed in August and benching in October, the first flowers may be cut before Christmas if additional light (40-60 watt lamps spaced 5 feet) is used. Without this aid the crop will come into flower in January. Continuity of bloom may be obtained by successive sowings. This non-branching type, which has come into general use, should be planted 3 inches in the row and 6 inches between rows, producing a single stem. The branching types should be planted 8 x 8 inches and topped when 6 inches tall to produce side shoots of sufficient length.

Flowering of stocks only occurs when the temperatures are below 60 degrees for the greater part of the night. To secure the greatest percentage of doubling the largest and most vigorous plants should be selected.

#### CUTHBERTSON STRAIN

##### SPRING FLOWERING

This new class of Sweet Peas has taken the place of the "Spring Flowering" types previously offered. Indoors, Seed should be sown November 1st, and such planting will start to bloom in April. **The Cuthbertson Class is recommended for sowing after November 1, and not earlier because they need the stronger Spring sun to bloom.**

They are exceptionally successful out of doors. In the North, they flower two weeks later than the Early Flowering, and two to three weeks earlier than the Summer Flowering.
